

**Bug Title:** Dropdown menu overlaps page content after window resize

**Environment**

- OS: Windows 11 Pro (build 26200)
- Browser: Chrome 121.x (Desktop)
- Viewport: 1366x768 → resized to ~1024x768

**Severity:** Medium

**Priority:** P2

**Preconditions**

- User is on a page with a top navigation dropdown

**Steps to Reproduce**

- 1) Open the page with the top navigation menu
- 2) Resize the browser window to a narrower width (e.g., 1024px)
- 3) Click the navigation item that opens a dropdown

**Expected vs Actual**

**Expected:** Dropdown reflows below the trigger and does not cover main content; items remain clickable.

**Actual:** Dropdown panel overlaps the page content area; part of the text and buttons become unclickable.
